PROFILE

CSE student at VIT Chennai with an interest in AI/ML and the possible uses of these technologies to create solutions to practical problems. I am very curious about the possibilities offered by AI/ML technology and like working on practical applications based on data-driven models. Passionate about developing affordable solutions for social problems, and keen on learning through real-time experience in hackathons.

SKILLS

soft skill

Strong Verbal and Written Communication
Team Collaboration
Analytical Thinking

Technical skills

ML/AI : PyTorch, NumPy, Pandas, Matplotlib, librosa
Programming: C, C++, Python, Java
Data Structures & Algorithms
HTML, CSS, JavaScript, react
Tools: Git, GitHub

EDUCATION

Higher Secondary Education (Class XII),

Laurel High School,

2022 – 2024 | rajamundry

B.Tech in computer science engineering,

Vellore Institute of Technology (VIT)

2024 | chennai

Expected Graduation: 2028

LANGUAGES

English • Hindi • Telugu

PROJECTS

Brain Tumor MRI Classification with Explainable AI (XAI)

06/2026

Python · PyTorch · EfficientNetB0 · Grad-CAM · SHAP · LIME

MRI classification of 4 different brain tumours using EfficientNetB0, which is intended to make the predictions of the medical field more explainable. Development of an explainability layer using Grad-CAM, SHAP, and LIME, which will be used to show the parts of the scan responsible for each prediction and then measure how much they agree. Development of Clinical Reliability Index, which will consider model confidence and explanation and will flag those predictions not reliable enough for human analysis.

Multimodel Heart and Lung disease detection, *Python · PyTorch · CNN · ResNet18 · Librosa · Matplotlib*

Built a deep learning framework to detect heart and lung diseases from both medical images and audio recordings. Trained CNN models on image datasets and ResNet18 on spectrogram representations of audio signals, accuracy ranging from 75% -98%. Implemented the full pipeline from audio preprocessing and spectrogram generation to model training, evaluation, and prediction visualization.

SmartVoyage, *Full-Stack Travel Planning Application* | *HTML · CSS · JavaScript · Node.js · JWT · REST APIs*
Developed a full-stack travel planning platform with JWT-based authentication, trip management, and an integrated dashboard covering live weather, currency conversion, expense tracking, and emergency contacts. Built separate frontend and backend repositories with a responsive multi-page UI.
